

UK Security Doors Doors (standard)

Just like everything else we do, our secure doors are delivered from start to finish by experienced members of our in-house team. This means that every stage of the process, from design through manufacture to installation, is delivered to the kind of high standards the Secure Door UK ethos is built upon. When a client comes to us to have doors manufactured and installed we work with them as genuine partners, creating a bespoke design that exactly meets the requirements of their building. We also offer a wealth of experience we can bring to bear on issues such as safety features, clear openings and the kind of legislative requirements that are part and parcel of many commercial buildings. If a client comes to us with existing plans which don't adhere to these standards then we can point the mistake out and suggest the steps which need to be taken. Above all, our doors combine strict standards of security and practicality with a strong visual ethos, enabling us to provide solutions in a range of designs, styles and colours. We don't think that fitting secure doors has to involve trading off style against practicality, since our bespoke solutions provide equal amounts of both.

As well as working from existing plans we are able to carry out an on-site survey of every job and use the results of this survey in order to create detailed CAD drawings created by our expert team of technicians. Having created the drawings we can use them as the basis of a fully detailed quote, and everything up to this point is provided free of charge. That's an investment we're willing to make because we're so confident that any client, upon seeing what we can offer and the level of service we provide, will appreciate the value of our offer. This is particularly true since our quotes include everything which will have to be paid for, with no hidden fees or extra charges guaranteed.

Once manufactured and installed, our security doors offer the best possible protection against vandalism and potential intruders. We work to the STS 202 specification, which is a set of standards used to cover items such as hinged, pivoted, folding or sliding door sets, curtain walling, security grilles, garage doors and roller shutters. Within STS 202 there are sub-sets of BR classifications which cover the length of time the door will provide resistance to an attempt to break in, combined with the range of tool (items such as screwdrivers, bolt cutters and pliers) which will have to be used. We work closely with each client to arrive at the ideal specification for their requirements, balancing the appearance of the door with the level of security required.

We also work to the Secure Door PAS 24:2016 certification, which sets minimum standards of enhanced security in line with BS 6375 Parts 1, 2 and 3. In addition to the certifications which apply specifically to secure doors, everything we deliver meets standards which include ISO 920, CHAS, ConstructionLine, ISO9001, BMTrada, Q Mark and SBD to name just a few. Our commitment to long term quality and satisfaction means that the service we offer doesn't end when the doors in question are installed. We offer a comprehensive 10 year warranty and back this up with annual on-site maintenance during which we confirm the integrity of the doors and reset any locks where needed.

If you need doors, windows and curtain walls then look no further than UK Security Doors. Our bespoke solutions combine quality with security and durability, and we work closely with each customer to deliver exactly what they need, when they need it, no matter where in the

UK they are based. Get in touch with us today and we'll work together to deliver the solution you're looking for, and if you're not sure what you're looking for, we'll help you to decide.
